

Case Study: Store Inventory Management and Report Automation

Scenario

You are working as a **Linux administrator in a retail store**.

Every day, the store manager maintains a **product inventory file** that contains product details such as **Product ID, Product Name, Quantity, and Price**.

Your tasks are:

- Organize inventory files using the Linux file system.

- Analyze inventory data.

- Identify low-stock products.

- Generate reports using **filter commands, grep, awk, and sed**.

- Compress and archive inventory reports.

- Automate report generation using **shell scripts and cron jobs**.

Tools used:

- File System

- Environment Variables

- Basic Commands

- User Commands

- Filter Commands

- GREP

- AWK / SED

- CAT Commands

- Process Management

- Compress and Archive

- Job Scheduling

- VI Editor
