

Case Study: Student Marks Processing and Report Automation

Scenario

You are working as a **Linux System Administrator in a training institute**.

Every week, instructors upload a **student marks file**. Your job is to:

- Store student data in the Linux file system.

- Process the data using **filter commands, grep, awk, sed**.

- Generate **student performance reports**.

- Compress and archive reports.

- Automate the process using **shell scripts and cron jobs**.

Technologies used:

- File System

- Environment Variables

- Basic Commands

- User Commands

- Filter Commands

- GREP

- AWK / SED

- CAT commands

- Process management

- Compress & archive

- Job scheduling

- VI editor
